Academic Year 2025 – 2026

CS199F (CS PRACTICUM) NARRATIVE REPORT

Submitted By:

ANDOSAY, Noela Mae D.

Submitted To:

Mrs. Jonalyn G. Ebron

Submitted to the Faculty of Mapúa Malayan Colleges Laguna

In Partial Fulfillment of the Requirements for the Degree of

Bachelor of Science in Computer Science

OVERVIEW

Company Background

AF Payments Inc. is a Philippine company specializing in electronic payment solutions and automated fare collection systems for the public transportation sector. The company is best known for operating the **beep™** stored-value card and the **beep™** mobile application, which provide commuters with a convenient, secure, and cashless payment system across various rail lines and selected public transportation services in the country. Through innovative payment technologies and data-driven solutions, AF Payments Inc. continues to support efficient, reliable, and seamless transportation services while contributing to the modernization of the Philippine public transport system.

The company plays a significant role in improving the daily commuting experience by providing digital payment solutions that simplify fare collection and reduce reliance on cash transactions. Its services support transportation operators in managing fare collection efficiently while offering commuters a faster and more convenient way to access public transportation. By continuously adopting technological innovations, AF Payments Inc. helps promote smarter and more accessible mobility solutions for the public.

During my practicum, I was assigned to the **Finance and Data Science Department**, where I served as a **Data Science Intern** under the supervision of **Mr. Hervey Jay Fulgueras, Senior Finance Supervisor – Settlement & Reconciliation**. The department is responsible for supporting data-driven operations by analyzing transportation data, generating reports, validating datasets, and developing business intelligence solutions that assist in operational monitoring and decision-making. Working in this department allowed me to gain practical experience in data analytics while contributing to projects that support the company's operational objectives.

Address

Office Address:

Ground Floor, Welfare Building, LRTA Compound, Aurora Boulevard, Brgy. 190, Pasay City, Philippines 1300

Nature of Assignments or Tasks Given

During my practicum, I was assigned to the **Finance and Data Science Department** as a **BIA Data Science Intern**, where I underwent structured training designed to develop my technical knowledge and practical skills in data analytics and business intelligence.

The first phase, **Orientation, Setup, and Cloud Familiarization**, focused on introducing me to the company's work environment, operational processes, and cloud-based data infrastructure. During this phase, I familiarized myself with the company's database structure by studying the available tables, column definitions, and the relationships among datasets. I also gained an understanding of the AWS cloud environment, particularly the AWS Glue Data Catalog, and learned how data is organized and managed within the company's data pipelines.

The second phase, **SQL and Data Querying**, involved developing SQL queries using Amazon Athena to retrieve and prepare datasets required for reporting and analysis. I learned to write and optimize SQL statements using joins, aggregations, and other query techniques while ensuring that the extracted data met the required business needs. This phase also strengthened my understanding of how structured queries efficiently retrieve large volumes of enterprise data.

During the **Data Validation and Pipeline Contribution** phase, I performed data validation by comparing extracted datasets with expected results to ensure their accuracy and consistency. I identified data discrepancies, verified business rules, and refined SQL queries whenever necessary. I also documented query logic and became familiar with how my SQL outputs contributed to the organization's overall data processing workflow.

The fourth phase, **Power BI Visualization**, focused on developing an interactive Rail Operations Dashboard using Microsoft Power BI. I transformed validated datasets using Power Query, created DAX measures, and designed interactive visualizations such as charts, cards, tables, and slicers to present operational insights. The dashboard underwent multiple

revisions based on testing and feedback from my supervisor to improve its functionality, readability, and overall presentation.

The final phase, **Technical Communication and Capstone Presentation**, involved documenting my work, presenting the completed dashboard, and explaining the methods used in data extraction, validation, and visualization. This phase strengthened my ability to communicate technical concepts clearly, receive constructive feedback, and present data-driven solutions in a professional setting.

Overall, these structured training phases strengthened both my technical and analytical competencies while allowing me to apply the concepts learned in school to real-world business scenarios. They enhanced my proficiency in SQL, Amazon Athena, Power BI, Power Query, DAX, and data validation while also developing my communication, teamwork, adaptability, documentation, and problem-solving skills in a professional workplace.

Total Hours Rendered

My practicum at **AF Payments Inc.** was conducted from **May 12, 2026, to July 25, 2026**, under the **Finance and Data Science Department**. During this period, I completed a structured internship program that combined technical training with hands-on project experience. The training was organized into five phases, beginning with orientation and cloud familiarization, followed by SQL and data querying, data validation, Power BI dashboard development, and concluding with technical documentation and project presentation.

Each phase was designed to progressively strengthen my understanding of data analytics and business intelligence while allowing me to apply the concepts learned in the classroom to actual industry tasks. Throughout the internship, I worked under the guidance of my immediate supervisor and participated in activities that enhanced my technical competencies, analytical thinking, and professional skills.

A summary of my practicum engagement is presented in Table 1.

Phase	Category	Value Range
1	Orientation, Setup & Cloud Familiarization	80
2	SQL & Data Querying	160
3	Data Validation & Pipeline Contribution	80
4	Power BI Visualization	120
5	Technical Communication & Capstone Presentation	40
Total		480

Output

Throughout the practicum, I completed several assigned tasks and contributed to different projects under the supervision of my immediate supervisor.

Output 1: Development of SQL Queries Using Amazon Athena

The primary objective of this task was to develop optimized SQL queries using Amazon Athena to extract, filter, and prepare raw rail transaction data, establishing a clean and reliable data source for subsequent reporting and dashboard development. To accomplish this, raw rail transaction data was retrieved from the company's database within the AWS Glue Data Catalog using Amazon Athena and SQL. The query development process involved identifying and selecting the necessary tables and columns, applying robust filters to isolate relevant transaction cycles, and validating the extracted records to ensure absolute accuracy and completeness before the dataset was utilized as the primary data source for visualization in Microsoft Power BI.

The data preparation workflow initiated with a comprehensive analysis of the database structures cataloged within the AWS Glue Data Catalog. Understanding the relationships between the historical master reference tables and the active transaction logs was essential to constructing SQL queries that accurately retrieved the precise data required for business reporting. Using the Amazon Athena Query Editor, complex SQL statements were iteratively developed to filter, clean, and consolidate raw transit data into a unified structure.

Figure 1. SQL Query Developed in Amazon Athena

Figure 1 displays the advanced SQL query developed within the Amazon Athena Query Editor.

A primary technical challenge addressed during this process was managing historical version control within the reference tables for transit stations and message types. Directly joining these tables to the transaction logs would have introduced redundant records and skewed transactional sums; this issue was resolved by implementing inner joins on subqueries utilizing the “max(version_no)” function to isolate only the latest active metadata. Additionally, reconciling schema differences between tables required explicit data type formatting, such as casting card application numbers to “BIGINT (CAST(... AS BIGINT))”, alongside strategic left joins to enrich transaction lines with specific terminal profiles, exception codes, and settlement groups without losing core transaction records.

```

238 LEFT JOIN tcm ON c.cm_msg_type_cd = tcm.msg_type_cd
239 LEFT JOIN tta ON c.ta_msg_type_cd = tta.msg_type_cd
240 LEFT JOIN m ON CAST(m.csc_app_no as BIGINT) = CAST(c.csc_app_no as BIGINT)
241 LEFT JOIN p ON m.csc_profile_type_cd = p.csc_profile_type_cd
242 )
243 SELECT *
244 FROM FinalSelect

```

SQL Ln 244, Col 17

1			MRT3	MRT3 Rail Service Provider	USAGE				
2			MRT3	MRT3 Rail Service Provider	USAGE				
3			LRT1	LRT1 Rail Service Provider	USAGE				
4			LRT1	LRT1 Rail Service Provider	USAGE				
5			MRT3	MRT3 Rail Service Provider	USAGE				

Figure 2. Results of the SQL Query

Figure 2 presents the query execution results showing a clean preview of the consolidated transactional data.

The resulting clean dataset compiled transactional records with precise service identifiers for transit networks such as MRT3 and LRT1. To ensure absolute data integrity, the extracted outputs were carefully validated against expected transaction counts and business requirements. Discrepancies discovered during this validation phase were resolved by refining the query's filters and join criteria, ensuring that the downstream analytics environment received a highly optimized, accurate, and high-performing data source.

Discussion

The development of the SQL query began with understanding the structure of the company's database, including the relationships among transaction tables and reference tables stored in the AWS Glue Data Catalog. Before writing the query, I familiarized myself with the available datasets, column definitions, and their corresponding functions to ensure that the required information could be accurately retrieved.

To prepare the dataset for reporting, I developed SQL queries using Amazon Athena that extracted rail transaction data from multiple related tables. The queries incorporated SQL techniques such as Common Table Expressions (CTEs), joins, filtering conditions, and data type casting to combine transaction records with their corresponding reference information. These techniques ensured that the retrieved dataset contained complete and consistent information required for analysis.

One of the key challenges during query development was handling versioned reference tables, where multiple records could exist for the same entity. To address this, the queries were designed to retrieve only the latest applicable records, preventing duplicate or outdated information from appearing in the final dataset. I also applied explicit data type casting when joining tables with different data formats to ensure compatibility and accurate query results.

After the queries were completed, the extracted data underwent validation to verify its accuracy and consistency with the source database. Any discrepancies identified during the validation process were investigated by reviewing the SQL logic and refining the query until the retrieved data matched the expected results. This process emphasized the importance of careful data validation before using the dataset for reporting.

The finalized SQL queries served as the primary data source for the Rail Operations Dashboard developed in Microsoft Power BI. By providing clean, accurate, and well-structured datasets, the queries supported efficient data visualization and enabled reliable reporting of rail transaction metrics.

Output 2: Development of a Rail Operations Dashboard Using Power BI

The objective of this task was to develop an interactive and user-friendly Power BI dashboard that visualizes rail transaction data and operational performance to support efficient monitoring and data-driven decision-making. Utilizing tools such as Microsoft Power BI, Power Query, DAX, Amazon Athena, and SQL, the development process transformed the validated rail transaction records into dynamic, visual reports. By presenting key metrics through a series of customized charts, KPI cards, tables, and interactive slicers, the dashboard enables stakeholders to efficiently monitor transaction trends, conduct GFS versus NGFS analysis, track hourly passenger velocity, and inspect exception logs.

With a clean transactional dataset established, the next phase of the project focused on transforming the raw query outputs into interactive business intelligence dashboards. The validated SQL dataset from Amazon Athena was imported into Microsoft Power BI, where the data was cleaned and structured within Power Query. This transformation process involved aligning date and time formats, standardizing empty or null values, and modeling table relationships. To support sophisticated business logic, several Data Analysis Expressions (DAX) measures were designed to compute key operational metrics, including ridership velocities, terminal device distributions, total completed rides, and total transaction values.

Figure 3. Rail Operations Dashboard – Rail Summary

Figure 3 displays the Rail Summary page, which provides a comprehensive operational overview of the entire transit system. This dashboard page highlights system-wide KPIs, machine performance strain, and loading versus usage splits to give stakeholders immediate operational visibility.

Figure 4. Rail Operations Dashboard – Rail Usage

To accommodate different stakeholder requirements, the dashboard was structured across multiple specialized pages. In addition to general transactional overviews, dedicated layouts were built to track loading trends and exception logs. Throughout the development process, various interactive elements—such as category slicers, time-based filters, and interactive tables—were implemented to let users filter the data by issuer agent, processing date, or station name.

Figure 5. Rail Operations Dashboard – Rail Loading

Figure 5 presents the Rail Loading page, detailing train passenger density and fare card loading capacity utilization over time. This visualization tracks daily loading trends across various service providers and details loading method distributions between point-of-sale terminals and ticket vending machines.

Throughout the development process, the dashboard underwent several rounds of testing and validation to ensure that all visualizations accurately reflected the source data. Feedback from my supervisor was incorporated to improve the dashboard's layout, usability, and overall presentation. The completed dashboard was presented to the practicum supervisor to verify that all visual layouts and computed metrics aligned with the company's reporting standards. Based on their feedback, visual hierarchies were adjusted, filter behaviors were refined, and DAX calculations were optimized to enhance dashboard responsiveness. This iterative development process produced an enterprise-grade business intelligence dashboard that successfully converts raw, multi-gigabyte cloud data catalogs into clear, actionable operational insights.

Synthesis

Learnings Gained

Throughout my practicum, I significantly improved my knowledge of SQL, particularly in writing and optimizing queries using Amazon Athena. I gained a deeper understanding of how enterprise data is organized and how structured queries efficiently retrieve large volumes of information for reporting and analysis.

I also developed practical experience in creating Power BI dashboards by performing data transformation through Power Query, developing calculated measures using DAX, and designing interactive visualizations that effectively communicate business insights. Working on real-world datasets strengthened my analytical thinking and exposed me to industry-standard data visualization practices.

Beyond technical competencies, I recognized the importance of data validation before presenting reports. Even minor inconsistencies can affect decision-making, making accuracy, attention to detail, and thorough verification essential in data analytics. Observing my supervisor's approach to solving technical challenges also helped me develop effective troubleshooting strategies, logical thinking, and professional work habits that extend beyond what is typically learned in the classroom.

Realizations

One of the most valuable realizations I had during my practicum was that technical knowledge alone is not enough to succeed in a professional environment. Effective communication, collaboration, adaptability, and a willingness to continuously learn are equally important in achieving quality results and working efficiently within a team.

I also realized that working with real-world data presents challenges that are not often encountered in academic projects. Developing reliable dashboards requires patience, careful validation, continuous refinement, and a strong understanding of business requirements to ensure that reports accurately represent the data.

Most importantly, I realized that seeking guidance and learning from experienced professionals is an essential part of personal and professional growth. Every challenge I encountered became an opportunity to improve my technical skills, strengthen my confidence, and develop a more professional mindset.

Conclusion

Overall, my practicum at AF Payments Inc. was a meaningful and rewarding experience that allowed me to apply the knowledge and skills I acquired throughout my academic studies in a professional setting. It provided valuable exposure to real-world data analytics, strengthened my technical competencies in SQL, Amazon Athena, Power BI, Power Query, and DAX, and enhanced my problem-solving, communication, teamwork, and adaptability.

Beyond developing technical expertise, the practicum taught me the importance of accuracy, continuous learning, and collaboration in producing reliable and impactful outputs. The supportive work environment and guidance from my supervisor further encouraged me to become more confident in my abilities and motivated me to continuously improve.

Overall, this experience has better prepared me for a future career in data analytics and reinforced my passion for using data-driven solutions to address real-world challenges.

EDUCATION

Mapúa Malayan Colleges Laguna 2022 - Present

Bachelor of Science in Computer Science | Specializing in Data Science and Analytics

- **Courses:** Fundamentals of Data Science; Introduction to Machine Learning for Data Science; Analytics Techniques, Tools and Application; Fundamentals of Big Data Engineering; Quantitative Methods

TECHNICAL SKILLS

Languages & Frameworks: Python, SQL, JavaScript/TypeScript, ReactJS, NodeJS, Flask
Databases & Tools: PostgreSQL, MySQL, MongoDB, Git/GitHub, Postman
Analytics & Visualization: Excel, Power BI, Pandas, NumPy, Matplotlib, Seaborn
Design & Visualization: Figma, Canva

SOFT SKILLS

- Analytical & Problem-Solving Skills
- Effective Communication & Team Collaboration
- Adaptability & Rapid Learning
- Critical Thinking & Decision Making
- Time Management & Organizational Skills
- Creativity & Design Thinking

PROJECTS

Geospatial Data Analytics System *React | Django | Python | Supabase*

- Developed a web-based system for hazard and environmental risk assessment across all **18** barangays in Cabuyao, Laguna
- Implemented full-stack functionality with interactive visualization, reducing data analysis time by **30%**
- Streamlined risk assessment workflows, improving data accessibility for users

Electronic Health Record (EHR) System *React | Vite | Node.js | JavaScript*

- Developed an EHR system managing **30+** patient records, appointment scheduling, and therapist access
- Built full-stack features that reduced manual data entry by **10%**
- Improved workflow efficiency for multiple therapists/users through centralized data management

Student Clustering System *HTML | Python | WEKA*

- Built a machine learning clustering model to classify **20+ student data entries** based on study behaviors
- Performed data preprocessing and model tuning, improving clustering consistency by **20%**
- Developed a mobile-friendly version, increasing accessibility and usability

Facebook Usage Analytics, Global Clustering Project *Python | Pandas | Matplotlib | seaborn*

- Analyzed and visualized Facebook usage across **100+ countries**, calculating penetration rates for fair comparison
- Applied **K-Means clustering** to segment countries into high, medium, and low engagement groups
- Created bar plots, histograms, scatter plots, and cluster plots to identify trends and insights

ACHIEVEMENTS & ACTIVITIES

- COMPTIA Tech+ Certification, Excel Basics for Data Analysis (Coursera)
- President's Lister, Dean's Lister (2022-Present)
- Member of the Junior Philippine Computer Society (JPCS)

Appendix B. Endorsement Letter

Ms Sherilyn Trinidad

AF Payments Inc.

Ground Floor, Welfare Building, LRTA Compound, Aurora Boulevard, Brgy. 190, Pasay City,
Philippines 1300

Dear Ms. Trinidad,

The BS Computer Science program of Mapúa Malayan Colleges Laguna requires their students to undergo a Practicum program for a minimum of 480 hours during the third term of our academic calendar.

We would like to request that Ms. Noela Mae D. Andosay, permitted to have her training in your company. We believe that your company can provide the relevant exposure necessary for our students to achieve the intended learning outcomes for the BS Computer Science program. We are confident that she will be able to acquire the practical knowledge and skills expected from a Computer Science graduate which, in turn, would guarantee a continuous supply of CS professionals needed by your company.

We thank you for your favorable action and we look forward to a more meaningful linkage that is mutually beneficial to our students and your company.

With warm regards,

JONALYN G. EBRON

REVISION NO. 00
REVISION DATE May 10, 2018

STUDENT TRAINING AGREEMENT AND LIABILITY WAIVER

IMPORTANT INFORMATION

- THIS FORM IS TO BE ACCOMPLISHED AND SUBMITTED BY STUDENT TRAINEE TO THE PRACTICUM ADVISER BEFORE STARTING THE PRACTICUM.
- READ AND UNDERSTAND THE PROVISIONS OF THIS AGREEMENT AND WAIVER.
- ENSURE THAT ALL SIGNATORIES SIGN THE FORM.

I, NOELA MAE D. ANDOSAY, and a student of MAPÚA MALAYAN COLLEGES LAGUNA (hereinafter referred to as "MCL"), do hereby voluntarily undergo on-the-job training at AF Payments Inc., hereinafter referred to as the "Host Company", located at Ground Floor, Modern Building, LRTA Compound, Avenue Road, Dagupan City, Philippines 2208, under the following terms and conditions:

a. That the practicum training will commence on May 12, 2028 and ends on July 25, 2028, and will have to complete a minimum of 480 hours required for the on-the-job training;

b. That I shall observe proper decorum and act professionally at all times and abide by the Company's rules and regulations and comply with those imposed for the training program, otherwise, I shall be excluded from further participation;

c. That in the course of my training program, I may have access to information which may be of confidential in nature and proprietary to the Company, for which I may be required to execute a confidentiality and non-disclosure agreement as a prerequisite to my participation in the training program;

d. That the time I will spend on the training program in the completion of my on-the-job training requirements will not and should not be interpreted or construed as working hours and should be regarded as non-compensable. Provided that, the Company may, as a unilateral act of liberality or generosity on their part, provide me with meal, travel, transportation allowances, accommodations, etc.;

e. That I fully understand that notwithstanding the allowances enumerated in the preceding section which I may receive, there exists no labor-management and/or employer/employee relationship between me and the Company where I will undergo my training;

f. That I shall exercise due care and diligence in the tasks assigned to me and personally be made answerable for any and all liabilities for damage to property or injury to third person, which may be occasioned by my intentional or negligent acts during the course of my on-the-job training;

g. That I shall likewise hold the Host Company and MCL free and harmless from any and all liability and responsibility for any sickness or injury to myself and third parties and damage to property which I may sustain and/or may occur at any time during the training program, including time spent in traveling to and from any and all premises and locations where I may be required to go to as part of my training program;

h. That the Company reserves the right to discontinue my training on reasonable grounds upon written notice to MCL and myself. Additionally, in the event my training program is discontinued for reasons attributable only to myself, I may be made to reimburse the Host Company for any/all the allowances, stipends, etc., which I may have received from them during and prior to the termination of my training program;

i. That in addition to my liability under section g and for the pre-termination of my training program provided for under section h hereof, I may be subjected further to disciplinary action in accordance with the school's student manual and/or be a ground for disqualification from graduation;

Signed on this 9th day of May 2028.

- HARD COPIES OF THIS FORM SHOULD BE COMPILED AS PART OF THE STUDENT'S PORTFOLIO.

DATE	May 12, 2026 - May 15, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Onboarding & SQL Training	SHIFT/TIME	8:00AM - 5:00PM

During my first week at the company, we attended an orientation where we were introduced to the organization's workflow, systems, and daily operations. The discussion included the goals and expectations for our internship,

On the second day, we learned about how data is collected, retrieved, processed, and organized from various sources before being used for analysis and decision-making. The tools introduced included Power BI for reporting and visualization, AWS Athena for querying data, KNIME for data processing, StreamSets for data integration and pipeline building, and Apache Airflow for workflow automation and scheduling. This session helped me better understand the organization's data flow and the importance of proper data handling in supporting business operations.

On the third day, we reviewed guides and sample SQL statements as a refresher and practiced creating and executing SQL queries. We used SQL and AWS Athena to test different database commands and improve our understanding of query construction.

At first, we experienced some difficulty understanding the proper syntax and identifying the correct columns needed for specific queries, but through continuous practice and guidance, we were able to improve our accuracy and confidence in writing SQL statements.

Overall, the activities during the first week strengthened my understanding of database operations, data analytics tools, and the organization's workflow.

DATE	May 18, 2026 - May 22, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Advanced SQL & Data Analysis Practice	SHIFT/TIME	8:00AM - 5:00PM

On Day 4, we continued enhancing our SQL and data analysis skills through hands-on activities involving real-world transportation datasets.

We explored the different columns used in transportation data and learned how each field is applied within actual datasets.

By testing various SQL queries, we gained a better understanding of the purpose of each column and improved our ability to retrieve and analyze data effectively.

On Day 5, we also continued practicing SQL using the sample query statements provided in the guide. Through testing different commands and conditions, we became more familiar with the dataset structure and learned how specific queries affect the results. Some queries initially produced incorrect or incomplete outputs because we were still adjusting to the relationships between tables and columns, but repeated testing and reviewing the guides helped us identify the correct conditions and improve our query results.

These exercises strengthened our confidence and accuracy in writing SQL statements.

On Day 6, Our team lead conducted a hands-on session in AWS Athena, where we were guided on how to navigate the platform and use its interface efficiently. We practiced writing and executing SQL queries, segregating transportation data using specific columns, combining tables through unique identifiers, and applying filters and conditions based on query requirements.

Through the guidance provided, we were able to better understand how queries are optimized and how transportation data is processed in a real-world environment.

On Day 7, a meeting was conducted where the interns were grouped and assigned tasks related to rail transactional data and non-rail transactional data. Each group focused on understanding the structure and requirements of their designated datasets.

We were also given a collaborative task where we created and executed SQL queries to retrieve required information. During the activity, we encountered challenges

in determining the most efficient queries due to the large number of tables and columns involved. However, through teamwork, collaboration, and assistance from our team lead, we successfully generated the needed results and gained a better understanding of the querying process and data analysis workflow.

On Day 8, we were assigned team-based activities that involved creating sample SQL queries based on different use cases and requirements.

The task required us to analyze various scenarios and determine efficient ways to retrieve data from multiple tables and columns. Although we were not able to complete all tasks on time due to still familiarizing ourselves with the database structure and relationships between columns, the activity helped strengthen our understanding of query construction, data retrieval, and collaboration within a team environment. Overall, the second week provided valuable hands-on experience

that improved both my technical SQL skills and my ability to work effectively with a team.

DATE	May 25-26, 2026 and May 28-29, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Query Refinement and Visualization	SHIFT/TIME	8:00AM - 5:00PM

During the third week of my internship, I continued working on SQL query development, validation, and data preparation for reporting and visualization.

On Day 9, we completed the remaining tasks from the previous week and reviewed the outputs to ensure that everything was properly organized and ready for validation. We were also assigned to generate monthly concessionary reports through SQL queries. While testing and refining the queries, I learned the importance of retrieving accurate data and ensuring that report outputs meet the required specifications.

On Day 10, we focused on refining and validating our SQL queries by testing different conditions and reviewing the results for accuracy and consistency. This activity helped me better understand how query validation supports reliable reporting and how small changes in query logic can affect the final output.

On Day 11, we continued comparing the query results with actual records to verify their accuracy. During testing, we encountered discrepancies caused by differences in the tables being used. After reviewing the data sources and making the necessary corrections, the query was successfully validated by our supervisor. This experience emphasized the importance of proper data source selection and thorough validation.

On Day 12, we started drafting a Power BI report using the CSV output generated from the validated query. We organized the data and explored different visualization options to present the information more effectively. Through this task, I gained a better understanding of how validated data can be transformed into meaningful reports for analysis and decision-making.

DATE	June 1, 2026 - June 5, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	SQL Query Finalization and Power BI Drafting	SHIFT/TIME	8:00AM - 5:00PM

During the fourth week of my internship, I focused on finalizing query outputs and developing the Power BI report for data visualization and analysis. This week involved validating data accuracy, preparing datasets, and transforming query results into meaningful visual reports to support reporting and decision-making.

On Day 13, I continued validating the query results by comparing them with the actual data records. After making the necessary revisions and checks, the query output successfully matched the source data. The results were reviewed and validated by our supervisor, confirming their accuracy and reliability. This process strengthened my understanding of the importance of data validation in ensuring accurate and trustworthy reporting.

On Day 14, after successful validation, I prepared the dataset for Power BI by reviewing the exported CSV file and ensuring that all required fields were complete and properly structured. I observed that proper data organization is essential in producing clear and effective visualizations, as inconsistencies in structure may affect report quality.

On Day 15, I developed the Power BI report by importing the validated dataset and creating initial visualizations. I explored different chart types and layouts to determine the most appropriate way of presenting the data. During this process, I encountered minor challenges in selecting suitable visuals, which I addressed by testing different options and evaluating their effectiveness in representing the data clearly.

On Day 16, I refined the Power BI report by reviewing the visualizations and making necessary adjustments to improve accuracy and readability. I ensured that the final report reflected the validated query results and supported clear data interpretation. This activity emphasized the importance of continuous refinement in producing reliable and meaningful reports.

DATE	June 8, 2026 - June 11, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Dashboard Development and Data Integration	SHIFT/TIME	8:00AM - 5:00PM

During the fifth week of my internship, I continued working on the development of the Power BI dashboard and the preparation of data needed for its visualizations. On Day 17, I started creating the Power BI dashboard template and planned its overall structure and layout. I also created a shared Power BI workspace and provided access to my assigned team members to support collaboration and report development. On Day 18, I continued working on the dashboard from home by developing and refining charts based on the project requirements. I explored different visualization options and adjusted the layout to improve the presentation of the report. On Day 19, I focused on extracting and validating the correct data needed for the dashboard. I reviewed datasets, tested chart outputs, and made adjustments to ensure that the information being displayed was accurate and aligned with the required metrics. On Day 20, our team continued populating the dashboard by completing additional charts and organizing them into separate sheets according to their categories. This helped improve the overall structure and organization of the report, making the information easier to navigate and analyze. Overall, this week enhanced my skills in Power BI dashboard development, data validation, and report organization. Through these activities, I gained a better understanding of how accurate data and effective visualizations contribute to creating meaningful reports for analysis and decision-making.

DATE	June 15, 2026 - June 19, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Dashboard Validation and Query Optimization	SHIFT/TIME	8:00AM - 5:00PM

During the sixth week of my internship, I continued working on the Power BI dashboard by completing the remaining visualizations, validating data, and making improvements based on feedback from our supervisors. On Day 21, our team worked on the remaining dashboard sheets and updated several visuals to improve their presentation, consistency, and readability.

On Day 22, we presented the drafted dashboard for review. During validation, we found slight differences between the dashboard results and the manually generated reports, leading us to revisit and improve our queries. We also learned useful Athena shortcuts that helped make our tasks more efficient and faster.

On Day 23, we continued refining the dashboard and reviewing the data to identify the causes of the mismatched values. We performed additional testing and compared the dashboard outputs with the manual reports to improve the accuracy of the results.

On Day 24, we presented our progress and were informed that further adjustments to the data and queries might still be needed due to validation issues. We continued reviewing the report outputs and troubleshooting the queries to ensure the dashboard reflected the correct information.

On Day 25, we completed the initial draft of the dashboard and finalized most of the visualizations. We also assisted with ongoing company events while awaiting further feedback and prepared to implement any additional revisions if necessary.

Overall, this week enhanced my skills in dashboard development, data validation, and query troubleshooting. It also reinforced the importance of accuracy, testing, teamwork, and continuous improvement when creating reliable reports and visualizations.

DATE	June 22, 2026 - June 26, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Dashboard Enhancement and Refinement	SHIFT/TIME	8:00AM - 5:00PM

During the seventh week of my internship, I focused on enhancing the Power BI dashboard by implementing improvements based on the comments and suggestions provided by our supervisor. On Day 26, We continued enhancing the Power BI dashboard by refining the visualizations and improving the overall layout. We also reviewed the report to identify areas that could be improved before receiving additional feedback.

On Day 27, We communicated with our supervisor through Microsoft Teams regarding the dashboard report. The comments and suggestions shared through the platform guided us on the revisions needed to improve the report's visuals, organization, and overall presentation.

On Day 28, We began implementing the recommendations received through Microsoft Teams by updating the dashboard layout, refining the visualizations, and making the necessary adjustments to improve clarity and consistency.

On Day 29, we continued the discussion with our supervisor, who provided additional feedback and clarifications. We addressed the remaining suggestions and further refined the dashboard based on the guidance received.

On Day 30, We continued working on the remaining revisions and enhancements to the dashboard. We reviewed the updated report to ensure that the applied changes were consistent and addressed the feedback provided throughout the week.

Overall, this week improved my skills in refining dashboard reports, incorporating constructive feedback, and enhancing data visualizations. It also reinforced the importance of continuous revision and collaboration in producing an accurate and well-presented dashboard.

TASK	Refining and Finalizing the Power BI Dashboard	SHIFT/TIME	8:00AM - 5:00PM

During the eighth week of my internship, I focused on refining and finalizing the Power BI dashboard by implementing the remaining improvements based on the feedback provided by our supervisor. On Day 31, we continued updating the Power BI dashboard by implementing the suggested improvements and refining the existing visualizations based on our supervisor's recommendations. On Day 32, we further enhanced the dashboard by improving its layout, visualizations, and overall presentation to make the report more organized and user-friendly. On Day 33, we reviewed the dashboard to identify additional areas for improvement and continued applying the necessary revisions to enhance its quality and consistency. On Day 34, we completed the remaining updates and refinements to the dashboard, ensuring that the data was accurate, consistent, and properly represented across all visualizations. On Day 35, we finalized the dashboard and presented the completed report with the updated data for review. We also documented the final changes made based on the previous feedback received. Overall, this week strengthened my skills in dashboard development, data visualization, and report refinement. It also emphasized the importance of attention to detail, iterative improvement, and applying feedback to produce a polished and accurate dashboard.

DATE	July 6, 2026 and July 10, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Designing and Completing the Final Dashboard Layout	SHIFT/TIME	8:00AM - 5:00PM

During the ninth week of my internship, I focused on designing and finalizing the Power BI dashboard while completing additional assigned tasks and preparing the report for review.

On Day 36, we reviewed the current progress of the Power BI dashboard and assessed the existing visualizations to prepare for the next stage of development.

On Day 37, we completed an assigned task from the Human Resources department and began designing the layout and visualizations for the Power BI dashboard.

On Day 38, we continued developing the dashboard while working remotely by refining its design and improving its visual components.

On Day 39, we finalized the dashboard design by making the necessary revisions and ensuring that the layout and visualizations were ready for the supervisor's review.

On Day 40, we completed the final dashboard design, ensuring that all visual elements were polished, consistent, and prepared for presentation and evaluation.

Overall, this week strengthened my skills in dashboard design, data visualization, and report development. It also reinforced the importance of planning, iterative refinement, and attention to detail in creating a professional and well-organized dashboard.

DATE	July 13, 2026 - July 15, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Finalization and presentation of PowerBI dashboard	SHIFT/TIME	8:00AM - 5:00PM

The tenth week focused on completing the final enhancements to the Power BI dashboard, presenting the finished report to the Business Intelligence and Analytics (BIA) Team, and reviewing the feedback for future improvements.

Day 42, my team and I finalized the Rail Operations Power BI dashboard by implementing the remaining layouts, design, and consistency. After completing the updates, we prepared the dashboard for presentation.

Day 43, we presented the completed dashboard to the Business Intelligence and Analytics (BIA) Team. During the presentation the team explained what the dashboard does and the functionalities of the charts.

We also took note of the feedback and recommendations provided to further enhance the report.
